

AC002 Extension Cable Pack

Installation

Use the extension cables to increase the length of the wire between the speed sensor and your Monit rally computer. Two cables are provided to allow you to select the most appropriate length for your installation.

Troubleshooting

Most problems are caused by electrical interference from other parts of your vehicle. To prevent this:

- Use the shortest cable possible for your installation.
- Keep the cable away from other parts of your vehicle's electrical system. Take particular care to route the cable away from ignition leads.
